Torflex Start Angle

Torsion axles generally are built in the range of 3500#-7000# and require quite a bit of information to order. The only real similarity to spring axles is the Hub Face, the spring center changes to the outside of the brackets that should be the same measurement as the outside to outside of the trailer frame. You also need to know how the axle is to be attached to the frame, either "Top Mount" or "Side Mount". Top Mount bolts directly to the frame, side mount has an extra bracket that is welded to the frame and the axle bolts to the bracket.

A typical torsion order will look like this:

I need a 7000# torsion axle, electric brake, 95" hub face, 80" outside to outside on the brackets, side mount, with a 22.5 degree down on the start angle.

There will be an order form at the end of this catalog to aid in the order process.

Prices tend to vary depending on the order but range from around \$220 for a 3500# to around \$500 for the 7000# axles.

We do not have a standard size for torsions except for one that is:
